# महाराजा राजा

## Rulebook

Maharaja is a strategic area control game. Don the vestments of the priests of four great Indian deities, travel across the kingdom to build shrines and statues dedicated to them. Secretly plan your strategy and try to overcome your opponents with the help of characters and their abilities.

Each round, the Maharaja, great king of India, visits a new city and rewards players according to their Gods' worship value in that city. Players begin each round by secretly planning actions using their action disc, all at the same time.

At the end of the seventh round, or when a player builds their seventh statue, the game ends. The player with the most prestige points wins the game.

Since Maharaja is a complex game, we hereby present all the rules for an introductory game. However, you'll find all the possible variations to the rules at the end of the rulebook for an ever new experience.

# Components

**1 Map**

**7 City Flags**

**8 Reward Tiles**

**16 Character Tiles**

**Prestige Points**

(25 x 1, 15 x 5, 15 x 10)

**Coins**

(20 x 1, 10 x 5, 5 x 10)

**1 Maharaja**

**7 Action Tokens**

**80 Shrines**

(20 in each player's color)

**28 Statues**

(7 in each player's color)

**4 Priests**

(1 in each player's color)

**2 Maharani Tokens**

Action tokens space

Statue spaces

Coins space

Prestige Points space

Character tile space

Shrine space

**4 Player Boards**

(with spaces for your components)

**4 Special Rules Tiles**

**4 Final Scoring Tiles**

**4 Action Discs**

Before starting the first game, assemble the Action Discs by clipping one Disc and two arrows together, as depicted above.

## Solo Version

**12 Action Tiles**

**3 Setup Tiles**

# Setup

- A** Place the **Map** at the center of the table.
- B** Shuffle the **Character tiles**. Randomly pick a number of tiles equal to the number of players + 3 and place them face up next to the Map, to create the Characters' display. Put the remaining Character tiles back in the box.  
*(For your first 4-player game, we suggest using Character tiles 1, 2, 5, 9, 12, 14 and 15.)*
- C** Place all the **Prestige Points, Coins and Action tokens** next to the Map to create the general supply.
- D** Randomly place the **Reward tiles** face up in their designated spaces on the Reward Track, from bottom to top. Place the **Maharani tokens** in their designated space next to the Reward Track.
- E** Randomly place the **City Flags** face up in their designated starting spaces of the Maharaja Track (leave the first two spaces on the left empty).
- F** Place the **Maharaja** next to the Map.

Each player must choose a color:

- G** Place the **Priest** of your color in the starting space on the Map.
- H** Take a **Player board** and place it in front of you.
- I** Take **8 Shrines** of your color and place them on your board in their designated space. All the other Shrines are placed next to the Map in the general supply.
- J** Place all the **7 Statues** of your color on your board in their designated space.
- K** Take **1 Action Disc**.
- L** Take **15 Coins** and place them on your board in their designated space.
- M** Take **3 Prestige Points** and place them on your board in their designated space.

Put the components of the remaining colors back in the box.  
Put the Special Rule tiles and the Final Scoring tiles back in the box; they won't be used in the introductory games.

# Important Rules

The game is divided into rounds. Each round you will perform two actions. Some actions allow you to build statues and shrines on the map which provide Prestige Points at the end of the game; additionally, they may give you bonuses and income, each round, if you have placed them in the city the Maharaja is visiting.

**Your total Prestige Points is secret to the other players while your Coins are not.**

**When you build a Statue, you must place it on one of the available Statue spaces.** Each City has 1 central Statue space and 6 external Statue spaces. Two external spaces in each City have a bonus illustrated inside: if you build a Statue there, you immediately receive that bonus.

**Statues in the central space are worth 3 Worship Points during the City Scoring phase. Statues in the external spaces are worth 2 Worship Points (see page 10).**

## Shrines

You can build Shrines inside Cities or inside Villages.

**Building a Shrine costs 1 Coin.**

When you build a Shrine inside a City, place it anywhere on the external circular Shrine area. There is no limit to the number of Shrines built inside a City.

**Shrines inside a City are worth 1 Worship Point during the City Scoring phase (see page 10).**

When you build a Shrine inside a Village, place it in one of the available spaces (there can be only 2 Shrines in each Village).

**There can be only 1 Shrine for each color inside each Village.** The Shrines inside the Villages are used to move your Priest (see next page).

## Statues

You can build Statues only inside Cities and only when the Priest is the City you chose.

**Building a Statue in the City where the Maharaja is, costs 12 Coins.**

**Building a Statue in all other Cities costs 10 Coins.**

If the red player builds a Statue in the city above, they must pay 10 Coins. If the Statue is built in the city below, currently visited by the Maharaja, they must pay 12 Coins instead.

Village

Shrine Spaces

**NB**

In a 2-player game, there can be only 1 Shrine in each Village, i.e. you cannot build a Shrine in a Village where there's already one.

The red Priest can move from the City below to the City above for free because there are red Shrines in the Villages of that road. It can also move to the City on the right by paying 1 Coin to the yellow and blue players.

The green Priest can move from the City above to the City below by paying 2 Coins to the red player and 1 Coin to the yellow player.

The yellow Priest can move from the City on the right to the City above (through the City below) by paying 1 Coin to both the red and blue players.

## Priests

**You can build a Statue or a Shrine inside a City only if your Priest is currently inside that City.**

You can freely move your Priest during your turn, before, during or after performing your action. You can freely move your Priest from one City to another any number of times and in any direction, following these rules:

- The Priest can only move along the illustrated roads on the Map.
- The Priest can only move through Villages where there is at least one Shrine built (by any player).
- If you move your Priest through a Village where you have built a Shrine, you can move it for free.
- If you move your Priest through a Village where you haven't built a Shrine yet, you must pay 1 Coin to each player who had built their Shrines in that Village.
- Moving your Priest through a City, or through the starting space, has no cost.

Therefore, in order to move your Priest from one City to another, you must check if there's a road that connects them, directly or through other Cities, and that has at least 1 Shrine in each of its Villages.

**Priests inside a City are worth 1 Worship Point during the City Scoring phase (see page 10).**

## Before you start

Before the first round, players make some important decisions. Since these decisions involve important strategic consequences, make sure you read the entire rulebook carefully before playing.

**Randomly choose a player** who will choose an available Character tile from the display and place it face up in its designated space of the Player board.

**In clockwise order, each player chooses an available Character tile from the display** and places it on their own Player board (for an explanation of all Characters, see Appendix on page 14).

Then, **following the Characters' tile order**, from the lowest to the highest number, each player must place 1 Shrine from the Player board inside an available Village space **for free**. Remember that there can only be 1 Shrine of your color in each Village.

Continue until each player has placed **4 Shrines** on the Map (4 Shrines remain available to each player on their Player boards).

# Gameplay

Each round is divided into 5 phases to be played in this order:

- 1 Maharaja Phase
- 2 Planning Phase
- 3 Actions Phase
- 4 City Scoring Phase
- 5 End of Round Phase

## 1 Maharaja Phase

Perform the following in this order:

- Place the Maharaja on the City indicated by the first City Flag on the left of the Maharaja Track. The Maharaja will be visiting this City until the next round. There is no other way to move the Maharaja.

The first City Flag on the left is the blue one. Place the Maharaja on the same symbol on the Map.

- Then move that City Flag on the first empty space on the right of the Track.

In the first round, it will be the number 1 space.

## 2 Planning Phase

This phase is played simultaneously by all players. Players will secretly plan the actions they may perform later, during the Actions phase. There are 9 different actions illustrated on the Action Disc.

Decide which actions you want to perform by pointing at them with the arrows of your Action Disc. You can decide to point at the same action with both arrows if you plan to perform the same action twice. After you have planned your actions, place your Action Disc face down in front of your Player board; you cannot take it back and change the direction of the arrows.

The Planning phase ends once all players have placed their Disc face down.

The arrows are pointing at the enlightened actions.

**NB** It might happen that you won't be able to perform all the planned actions due to the other players' choices, so choose them carefully!

## 3 Actions Phase

This phase is played following the order indicated by the Character tiles in front of the players, from the lowest to the highest number.

During your turn, flip your Action Disc face up and perform both actions you have planned, choosing their order. You are not obliged to perform an action in case you don't have the necessary amount of Coins. However, it is possible to perform only part of the planned action (for example, building one piece only instead of two).

### Action Tokens

Some external Statue spaces with bonuses and some Characters will reward you with an Action token. When you receive one, place it on your Player board in its designated space.

If you have an Action token in your supply, you can use it to perform an additional action of your choosing. Put the Action token back in the general supply and perform the action.

You can use only one Action token per turn. You can perform any action illustrated on the Action Disc, except for the "Changing Character" action.

The Actions phase ends once all players have played their turn.

### The Actions

There are 9 possible actions:

- Building 1 Statue with a discount

Place 1 Statue from your Player board into an available Statue space, following the general building rules.

Pay its price with a discount of 1 Coin.

- Building 1 Shrine with a discount

Place 1 Shrine from your Player board into an available Village space or into a City, following the general building rules.

Discount the price by 1 Coin, making this action free.

- Building 1 Statue and 1 Shrine

Place 1 Statue from your Player board into an available Statue space and place 1 Shrine from your Player board into an available Village space or into a City, following the general building rules. You can choose the order.

- Building 2 Shrines

Place 1 Shrine from your Player board into a City and 1 Shrine from your Player board into a City or an available Village space, following the general building rules. You must build at least one of the two Shrines into a City. You can choose the order.

**NB**

Remember that you can move your Priest before, during and even after performing any action. For example: when performing the "Building 1 Statue and 1 Shrine" action, you can move your Priest into a City to build a Statue, then move it to another City to build a Shrine, then move it again to another City.

- Taking 3 Coins

Take 3 Coins from the general supply and place them in their designated space on your Player board.

- Taking 2 Shrines

Take 2 Shrines of your color from the general supply and place them in their designated space on your Player board.

- Paying 3 Coins in exchange for 2 Prestige Points

Pay 3 Coins to the general supply and receive 2 Prestige Points from the general supply. Place them in their designated space on your Player board.

### Changing Character

Put your Character tile back in the display. Then, take any other Character tile from the display or from another player.

If you take it from another player, that player will immediately take a new Character tile from the display (they may choose the one you just returned).

**NB**

You can use your starting Character's special ability before changing it and you can use your new Character's ability in the same turn!

### Changing the Maharaja Track

Move a City Flag of your choosing by exactly 3 spaces to the left.

If the City Flag should end up onto a space occupied by another City Flag, slide the latter to the right to make room for it. If necessary, slide all overtaken City Flags to the right (without changing their order). Should it end up on an empty space, the overtaken City Flags won't slide. You can also decide to move the first City Flag on the Maharaja Track further to the left.

In the example above, the City Flag should move to an occupied space on the Maharaja Track: slide the overtaken tiles to the right. All the other City Flags must not be removed.

In this case, only the blue Flag on the left slides to make room.

In this example, the City Flag moves to an empty space, therefore the pink Flag doesn't slide.

## 4 City Scoring Phase

During this phase, the Maharaja rewards players based on their Worship Points in the currently visited City. Calculate each player's total **Worship Points (WP)** in this City, according to the following values:

- Statue in the central space = 3 WP
- Statue in any external space = 2 WP
- Shrine inside the City = 1 WP
- Priest inside the City = 1 WP

Each piece inside the City provides a Worship value. Note: some Character files have effects that are relevant during the City Scoring phase (see Appendix on page 14).

After this calculation you will have the players' Worship value ranking: the first player in the ranking is the one who has the most WPs, and so on. Ties are broken by Character tiles; the player with the lowest number wins the tie.

Red Player: 6 WPs	Yellow Player: 4 WPs
Green Player: 5 WPs	Blue Player: 2 WPs

With regards to the example above, red is ranked first, green second, and so on.

Players will gain a reward of Coins according to their WP ranking and the chart illustrated on the board (depending on the number of players).

1°	2°	3°	4°	5°
12	10	8	5	3
12	9	6		3
12	6			3

Then, starting with the player in first WP ranking order, then down, each player with at least 1 WP will choose an available Reward tile and immediately apply its effect (for a clarification of all Reward tiles, see Appendix on page 14). After performing the effect, move the tile you chose to the first available empty space of the Reward Track, directly above the top-most tile.

**NB**

In a 2-player game, only the first 3 Reward tiles can be chosen. In a 3-player game, only the first 4 Reward tiles can be chosen. In a 4-player game, only the first 5 Reward tiles can be chosen. This is illustrated by the icons to the left of the Reward Track.

If you don't have any Worship Points during the City Scoring (there isn't a piece of your color in the City and you don't have any Character that provide WPs), you get a compensation reward of 3 Coins, but you do not choose any Reward Tile.

## 5 End of Round Phase

Perform the following in order:

- If there are empty spaces between City Flags on the Maharaja Track, slide City Flags to the right to close the gaps.

You will do this only if the "Changing the Maharaja Track" action has been performed by moving one of the City Flags on the far left, creating a gap.

- Slide all Reward tiles down.

The available Reward tiles change each round.

- If already taken during the previous round, put the Maharani tokens back on their designated space next to the Reward Track (see Appendix at page 14).

## End of the game

The end of the game is triggered when at least **one** of the following conditions are met:

**The seventh round has just been completed.**  
**One, or more, players have built all of their Statues.** If this occurs, finish the round as normal, then proceed directly to Final Scoring.

## Final Scoring

At the end of the game, players score additional Prestige Points, based on what they have built.

First, return all Character tiles back to the supply; their effects may not be used during Final Scoring.

Players receive Prestige Points (PP) as follows:

 =  3 PP for each Statue of your color anywhere on the Map.

 =  1 PP for every 5 Coins you have in your supply (no rounding).

 =  2PP for each City you have the most Worship Points in.

If there is a tie for having the most WP in a City, all tied players receive 1 PP.

**The player with the most Prestige Points wins the game!** Ties are broken in favor of the player who built the most Statues. In case of a further tie, the player with the most Coins between them wins. In case of a further tie, those players share the victory.

You can see a final scoring example on page 13.

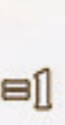

## Variations

Special Rule tiles can be used to change the basic rules of the game. Final Scoring tiles can be used to vary the way players score Prestige Points at the end of the game. You can choose any number of Special Rule tiles to use and/or only one Final Scoring tile during the same game.

During the setup, choose or pick randomly one or more Special Rule tiles and/or a Final Scoring tile and place them on their designated spaces on the Map, replacing the similar icons if needed.

The special rules are applied during the entire game.

  During the City Scoring phase, the first player in the ranking will also receive 1 PP.

 =  During the City Scoring phase, Statues in external spaces are worth 1 WP.

  Building a Statue in a City not currently visited by the Maharaja costs 12 Coins.

  When you perform the "Changing Character" action, you can only take Character tiles available in the display, not from other players.

At the end of the game, you will score additional Prestige Points following the Final Scoring tile rules, ignoring the standard rules.

 =  3 PP for each City where you have the most WP (2PP for all tied players).

 =  1 PP for each City where you have at least 1 Statue or 1 Shrine.

 =  2 PP for each road where you have built 1 Shrine in both Villages (roads with 1 Village only don't count).

 =  2PP for each City where you have built at least 2 Statues.

  =  Lose 1 PP for each Shrine of your color left in the general supply.

The final scoring will take place after the game ends. In the example above, players will receive 3 PP for each statue they built and 1 PP every 5 Coins left in their supply. Then, they must calculate who is the player with the most WP in each City; only Statues, Shrines and Priests count. Players will finally add their PP received during the game.

 The green player is first with 5 WP (one central Statue=3, one Shrine=1, one Priest=1) and receives 2 PP

 The red player is first with 6 WP (two external Statues=4, one Shrine=1, one Priest=1) and receives 2 PP

 The blue player is first with 4 WP (one central Statue=3, one Priest=1) and receives 2 PP

 The yellow player is first with 6 WP (two external Statue=4, one Shrine=1, one Priest=1) and receives 2 PP

 The red and the green players are first with 5 WP (one central Statue=3, two Shrines=2 for the red; one external Statue=2, three Shrines=3 for the green) and receive 1 PP each

 The yellow player is first with 5 WP (one central Statue=3, one external Statue=2) and receives 2 PP

 The blue and the green players are first with 4 WP (one central Statue=3, one Shrine=1 for the blue; two external Statues=4 for the green) and receive 1 PP each

# Appendix

## Characters

Every Character has a special ability that is applied in different phases of the game:

**1x** 1x: You can use this special ability once per round, during your turn.

**∞** Continuous: You can always use this special ability.

**!** Scoring: You can use this special ability during the City Scoring phase.

- 1 No effect.
- 2 Take 1 Shrine of your color from the general supply.
- 3 You can pay 2 Coins to take 1 PP or vice-versa; you can do this up to 3 times.
- 4 You can pay 1 PP in exchange for an Action token.
- 5 Your Priest is worth +1 WP.
- 6 Take 1 PP.
- 7 Each set of 2 Shrines you have built inside the City is worth +1 WP.
- 8 You have +1 WP (even if you have no pieces in the City).
- 9 Your Priest moves for free; other players are not given Coins when you move your Priest.
- 10 Perform a "Changing the Maharaja Track" action.
- 11 Each time you receive PP, add 1 additional PP.
- 12 You can build Statues and Shrines in any City, even if your Priest is not there.
- 13 Build a Shrine taking it directly from the general supply. You can build it in any City even if your Priest is not there.
- 14 Take 1 Action token.
- 15 Each time you build a Statue, pay 3 Coins less.
- 16 When you apply the effect of a Reward tile, apply it twice.

## Reward files

-  Take 3 Coins.
-  Take 3 Shrines of your color from the general supply.
-  Take 1 Prestige Point and 1 Coin.
-  All other players must pay 2 Coins (if able) to the general supply. If they only have 1 Coin, they must pay that Coin, and receive no further penalty.
-  Take 2 Prestige Points.
-  You may pay 1 Coin in exchange for 1 Prestige Point. You can do this up to 3 times.
-  Build 1 Shrine from your personal supply for free. You can build it inside any City even if your Priest is not there.
-  Take 1 Maharani token and place it on a ny Character tile in the display (not owned by any other player). You can use that Character's special ability until the end of the next round, even if that Character tile is taken by another player (the token stays on it). If the Character has a 1x ability, immediately remove the Maharani token when you use the ability. Otherwise, the Maharani token is removed at the end of the round. (If you choose this Reward tile while you have the Character tile 16, place 1 Maharani token on two different Character tiles in the display.)

# Brahmabot

A solo mode for Maharaja  
by David Turegi & Simone Luciani

Maharaja can be played in a solo mode. As a single player, you can challenge an opponent automa player, Brahmabot, with 3 levels of difficulty.

Brahmabot will perform actions, use Coins and receive Prestige Points following special rules. It will follow the indications given by one Action tile available in a display, yet you don't know which one. While two of these files are visible, one is hidden; this way, you have only partial information about its decisions.

- Choose a **level of difficulty** (easy – medium – hard).
- Randomly select one of the **Setup tiles**. Brahmabot will place 1 Shrine in the marked Villages. If you're playing with the easy level, place 4 Shrines on the green marked Villages only; with the medium level, place 6 Shrines on the green and blue marked Villages; with the hard level, place 8 Shrines on all green, blue and red marked Villages.

## Setup

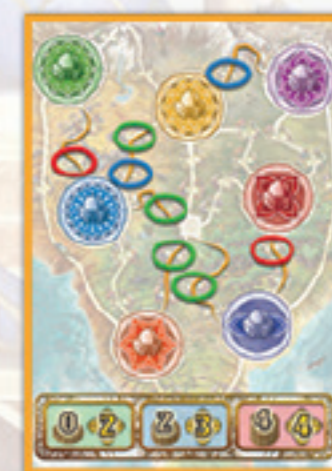

Setup a 2-player game, with the following changes:

- Brahmabot will take **1 Player board, 7 Statues and 20 Shrines** (it begins the game with all Shrines already available).
- Shuffle all the **Character tiles** and create a face down stack and place it next to the Map. Brahmabot will take the first Character tile from the stack. Draw 3 Character tiles and place them face up to create the display. Put them in a row, so there is a "right" and a "left" end of the display.

Pick a Character tile by choosing it from the 3 tiles in the display, draw a new tile from the stack and place it on the right end of the display.

Even if you pick the Character tile in the left or central position of the display, then draw a new one and add it to the display on the far right.

With the easy level, Brahmabot will place 1 Shrine in all Villages marked with a green circle.

- Brahmabot will take **Coins and Prestige Points** according to the level of difficulty.

Level	Coins	PP
Easy	0	2
Medium	2	3
Hard	4	4

- Place your **4 starting Shrines** as usual.
- Shuffle the **12 Action tiles** to create a stack, and place it next to the Map face down.

# Gameplay

The **Maharaja phase** is performed as usual.

During the **Planning phase**, draw the first 3 Action tiles from the stack. Place two of them face up and one face down in a row. Then, select your actions on your Disc as usual.

Brahmabot will perform its actions following one of the 3 Action tiles in the display.

The **Actions phase** is performed as usual, following the order indicated by the Characters' numbers.

You can perform your actions normally, with the following changes.

When you perform a "Changing Character" action, the Character tile you return is removed from the game. After taking a new Character tile (you can take it from Brahmabot or from the display), draw a new Character tile from the stack and place it on the right end of the display. If you took Brahmabot's Character, it will take the Character on the left of the display.

If you have to pay Coins to Brahmabot (for moving your Priest using its Shrines), just place them on its Player board.

**When it is Brahmabot's turn, it decides which Action tile must be performed.** Turn the first Action tile from the stack and look at its lower section: the "check" symbol will indicate which of the three tiles in the display must be performed. If the face down tile must be performed, flip it face up.

**1** Brahmabot performs the actions illustrated in the upper section of the tile. (For a detailed description of the Action tiles, see next page.)

**2** Brahmabot moves its Priest to the City indicated on middle section of the tile. It might be a specific City (City symbol) or the City where the Maharaja currently is (Maharaja symbol).

**If Brahmabot's Priest cannot reach that City from its current location (there are no roads with at least one Shrine in all their Villages), it will build the Shrines it needs to move there, without paying for them.** It will choose the path that needs less Shrines and it will move its Priest there. For each of your Shrine it uses, you will receive 1 Coin from the general supply (Brahmabot's Priest moves for free).

Then, Brahmabot's turn ends.

Brahmabot must move its yellow Priest to the lower City on the left, which is not connected to the City where its Priest is. The best possible path to connect them is the one illustrated, where Brahmabot needs to build only 1 Shrine in the depicted Village. Brahmabot will build the Shrine there for free and it will move its Priest. Then, its turn will end.

**If that City is already connected, Brahmabot will move its Priest to that City.** If there are more than one possible path, it will select the one with the least number of your Shrines (you receive Coins from the supply accordingly).

Only after Brahmabot has moved its Priest to an already connected City, it will perform one of the following:

**If it owns 6 or more Coins, it will spend 6 Coins and build a Statue in its Priest's location.**

Otherwise, if it owns 5 or less Coins, it will build a Shrine in its Priest's location for free and receive 1 Coin.

Then, Brahmabot's turn ends.

Brahmabot must move its yellow Priest to the lower City on the right, which is already connected by different paths. B. will choose, among the path illustrated above, the one depicted with a continuous line because it has only two of your Shrines. You will receive 2 Coins. If B. owns 6 Coins, it will pay them to build a Statue in the lower City on the right. Otherwise, B. will receive 1 Coin and build a Shrine.

The **City Scoring phase** is performed as usual, with the following changes:

**If you are the first player in the ranking (you have the most WP), you will receive 12 Coins as usual; Brahmabot will receive 1 Prestige Point instead of Coins.**

**If Brahmabot is the first player in the ranking, it will receive 4 Prestige Points instead of Coins; you will receive 6 Coins as usual (if you have at least 1 WP).**

Brahmabot never takes Reward tiles.

If you have to take a Reward tile, you can choose it only from the first two tiles from the lowest part of the Reward Track. Apply its effect, then remove it from the game.

If you're not taking a Reward tile (because you have no WP during the City Scoring), remove the first tile in the lowest part of the Reward Track from the game.

During the **End of Round phase**, remove the performed Action tile from the game and shuffle the rest together back in the stack (including the two tiles remained in the display).

**NB**

Brahmabot will never use its Character's special ability! Brahmabot's Character tiles are used only for the turn order.

## Building concerns

**Brahmabot never pays to build Statues and Shrines as its main action** (those illustrated on the upper section of the Action tiles), **nor does it pay to move its Priest.** Only at the end of its Priest's movement (if it moved without building Shrines), it can build an additional Statue paying 6 Coins.

When Brahmabot builds a Statue, it will build it following this priority order:

- In the central space, if available;
- In the top external space with bonus, if available (the bonus is not applied to Brahmabot);
- In the bottom external space with bonus, if available (the bonus is not applied to Brahmabot);
- Any other space.

Brahmabot has all its Shrines already available on its Player board from the beginning of the game. In case it needs to build a new Shrine but has already placed all of the available ones, it must move one of the already built Shrines to the new space instead. The Shrine will be taken from the City on the far right of the Maharaja Track where it has one Shrine.

## Brahmabot's Actions

Build a Statue in the City currently visited by the Maharaja.

Build a Shrine in the City currently visited by the Maharaja.

Build a Statue in the City on the far left of the Maharaja Track.

Build a Statue in the first City from the left on the Maharaja Track with the central space still available.

Build a Statue in the first City from the left on the Maharaja Track in which Brahmabot is second in the ranking and with the smallest difference in WP between you and it.
